Project's scope

From August 2019 to July 2020 I will be working on my Master's Thesis project. I will be graduating with a Bachelor's and Master's degree in August 2020. I intend to work in the field of auditory perception and I wish my master's thesis project to be based on the same. The project which I will be working on at CCRMA will continue as my master's thesis project at my university.

What I want to accomplish at CCRMA is, to start the project, discuss and set the problem statement and get some preliminary results in the span of 2 months or so. Also I want to establish a good rapport between my advisor at CCRMA during my stay which will further ensure easy communication for the online collaboration when I return back to India and work on the same project.

This depends heavily on the time span for which I will be at CCRMA. I am also donw to work on a mini project at CCRMA which will give me a good research heads-up for my master's thesis work.

Project's timeline

A rough sketch of my project timeline is as follows:

- First two weeks: Decide the exact problem statement, scope of the project, what datasets I will be using for analysis and literature review
- 4 weeks: Work towards implementing what has been decided
- Last two weeks: Get the results and discuss the interpretations. Also, plan out the future work given the results achieved.
